

Pilot 4: Published news automatically to speech

Functionality

- News to speech service for publishers who have no radio stations or who like to improve their services

Features

- The speech is synthesized automatically from the written articles without human intervention
- Program that uses articles in xml format and Windows SAPI interface to generate speech files

Testing / evaluation

- Sanomalehti Karjalainen has been testing XmlToSpeech in their production environment. Testing has proved that technically system works. Any user experiences has not been able to collect.
